Burns

1-first degree burn :

is superficial and causes local inflammation of the skin. The inflammation is characterized by pain, redness, and a mild amount of swelling. The skin may be very tender to touch.

2-Second degree burns :

are deeper and in addition to the pain, redness and inflammation, there is also blistering of the skin.

3-Third degree burns :

are deeper still, involving all layers of the skin, in effect killing that area of skin. Because the nerves and blood vessels are damaged, third degree burns appear white and leathery and tend to be relatively painless.

Wounds

Skin Wounds: Cuts, Scrapes, Abrasions

A skin wound is a physical trauma or injury to the skin tissues resulting in their damage.

Wounds can be **chronic** (skin ulcers) and **acute** (cuts, scrapes, abrasions, animal or insect bites, etc.).

Alpha Medicine

* Cuts, scrapes and abrasions belong to the open wounds, which can easily be infected, thus they need to be treated even if they seem to be only minor skin traumas.

* Bruises, on the other hand, belong to the closed wounds, which are characterized by the unharmed outer layer of the skin and injured underlying tissues.

Alpha Medicine

Rash

A rash is an area of irritated or swollen skin. It might be red and itchy, bumpy, scaly, crusty or blistered. Rashes are a symptom of many different medical conditions.

Contact dermatitis is a common cause of rashes. It causes redness, itching and burning where you have touched an irritant, such as a chemical, or something allergic.

Some rashes develop immediately. Others form over several days.

What’s Double Care

Double care is the Healing Magic

Helps to promote wound healing, reduce pain, minimize scar appearance, decrease swelling, redness, itching, and prevents irregular pigmentation.

Alpha Medicine

Double Care Gel

Novel Hydrophilic gel, with oxygen free- radicals binding capability can promote wound healing by decreasing the inflammation and preventing the overgrowth of bacteria.

Increase the humidity property of the skin.

Stimulated epithelisation, help to heal minor wounds.

Alpha Medicine

Vitamin A, E:

1- Improves cell regeneration.
2- Prevent over growth of bacteria.
3- Scavenge free radicals
